

Equipment and Safety Training, Cumberland College

This funding has enabled the College to purchase equipment for trades training, specifically the Applied Certificate in Electrical and Applied Certificate in Industrial Mechanics, and employ specialized trainers to deliver safety training required by the mining industry. Owning the equipment allows for greater flexibility in delivery, and increased the number of times each program is offered on an annual basis.

The goal of the partnership is to inject up to 60 electrical and 36 industrial mechanics apprentices into the Saskatchewan workforce over the five-year period.
